To commission this training

This Liver Care Study Day for Primary Care training can be delivered in your area, to enquire about commissioning this please contact us and we will be delighted to help info@etaltraining.co.uk

To attend this training

To see where there is a Liver Care Study Day for Primary Care currently available, please go to the Study Day diary at www.etaltraining.co.uk

Is this study day for you?

This interactive day is suitable for Primary Care Healthcare Professionals including GPs, Practice Nurses and Community Nurses. The day will cover the impact of obesity, alcohol and viral blood borne infections on liver health and look at the importance of lifestyle and behaviour change in liver care. Come along and learn how you can be more effective delivering liver care in your practice.

What is it about?

We set the growing national and individual impact of liver disease in perspective; this is a national crisis so action is required. We move on to the liver and its functions laying the foundation for understanding the process for monitoring liver disease and the potential disastrous consequences of liver disease.

The three main ways to damage your liver, which are alcohol, virus and obesity are then explained and you will even get a guest appearance of a "virus" to aid the memory on interpreting the result.

This study day was commissioned by the National Clinical Director for Liver Care after he attended a CKD study day and appreciated the informal but practical approach used by the Et al Trainers.

So with our usual style this day is relaxed and interactive using demonstrations, stories but most importantly it is focused on what people working in general practice need to know and then do about livers.

"The day was brilliant, we had fun and learned loads. Your innovative approach was very relaxing and staff were willing to take part and engage with you which is always excellent."

If you are thinking of commissioning training in your area we would love to chat through what we could do to help you achieve your training goals.

Liver Care Study Day for Primary Care

www.etaltraining.co.uk

What happens on the day?

09.00 Coffee and registration

09.30 The importance of liver care and the National Liver Strategy

10.00 Normal liver function - back to basics

11.15 Coffee break

11.30 Liver damage - The consequences of liver damage

12.00 Liver function tests in the diagnosis and monitoring of liver disease

12.30 Non Alcoholic Liver Disease - what we must do in primary care

12-45 Lunch

13.30 Alcoholic Liver Disease - what we must do in primary care

14.15 Coffee break

14.45 Hepatitis A, B & C - what we need to do and be aware of in primary care

15.30 Clinical cases, top tips and facilitating behaviour change

16.00 Close and evaluate

What's the aim of the day?

The aim of the day is for healthcare practitioners to acquire knowledge of common Liver diseases so they have the confidence to diagnose and manage these conditions effectively in Primary Care.

What's the Result?

At the end of the day delegates will:

- Understand the importance of liver disease to the individual and impact on the general practice population
- Understand how the normal liver works and what goes wrong in common liver diseases
- Understand liver function testing and monitoring common liver diseases in primary care
- The rationale behind the National Liver Strategy and prevention & management of common liver diseases in primary care
